**COMPACT SOLUTIONS ANNOUNCES NEW PACKAGED SERVICES TO
CONSOLIDATE DATA INTEGRATION APPLICATIONS AND REDUCE COST**

*Compact's C.DIMC™ slashes up to 80 percent of time to migrate/consolidate
data integration processes*

OAKBROOK TERRACE, IL; Feb. 24, 2009—Compact Solutions, a premier consulting organization specializing in enterprise information solutions, today announced a new service package that helps businesses reduce the complexity of their business intelligence infrastructures. The new service, C.DIMC™ Compact Data Integration and Migration Console, cuts up to 80 percent of the time and complexity to migrate or consolidate data integration processes—whether SQL-based scripts or graphical ETL applications.

A key market differentiator of this service is its unique proprietary automation facility, or console, developed by Compact engineers through the company's ETL Center of Excellence. Compact's proprietary, patent pending algorithms automatically convert existing data integration processes from an existing platform into a functionally equivalent, application in a target platform.

For example, C.DIMC can automatically convert most of the integration logic from Teradata or other SQL-based platforms to IBM DataStage, Informatica, or Ab Initio designs. Supported by Compact's expert consulting services, the C.DIMC solution ensures a successful, risk free migration in a fraction of the time it takes to complete such migrations manually. The company estimates that the C.DMIC solution can reduce the time and resources of a typical migration effort by a factor of 2-to-4 .

"The majority of businesses today do not have enterprise-wide standards for data integration tools and architecture," said Pankaj Agrawal, Compact's CEO and CTO. "As a result, large, information intensive organizations are managing and supporting multiple ETL tools or SQL-based integration scripts that sap resources and budgets. The result is a lot of fragmentation of tools and meta data."

Compact has targeted the C.DIMC solution to provide a way to quickly rationalize disparate data integration infrastructures, reducing operating cost and complexity.

COMPACT SOLUTIONS ANNOUNCES NEW PACKAGED SERVICES—PAGE 2

“Compact CDIMC solution can actually be self-funding because the client can realize immediate, dramatic savings this year, freeing up budget that was earmarked to support multiple integration platforms,” Agrawal adds.
